

# Wireless Intelligent PTZ Camera Instruction Manual

IOS

Android

play.google

## Installation

Scan the QR code to download the App.

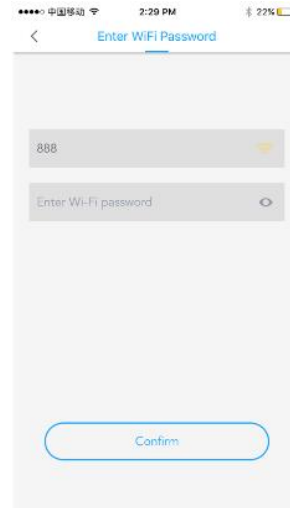

Press the  icon in the top right-hand corner. Select add to [New camera] or connect [Friend's Camera]

Proceed with the connection by choosing the PTZ Camera.

To proceed with the activation, you will need a WiFi password to connect to your local network.

1. Enter the WiFi Password and press 'Confirm'.
2. Click on the blue sound wave button.
3. After the warning tone, press on [Next Step].

Note: Turn on your mobile device microphone and camera for sending sound wave or capturing QR code.

If there is no warning tone:

1. Send sound waves again, or
2. Add camera by QR code

3. Check the notifications, if the device has been connected.

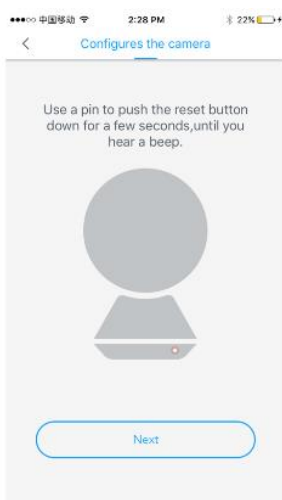

After hearing the warning tone, scan the camera body to bind with the QR code.

After the camera binding has been completed, click on the screen to enter real-time video browsing.

To reset and activate the device, see below:

1. Use a needle to gently insert into the configuration hole or press the RESET button after turning on the device.
2. Click [Next Step] after the beep
3. The camera indicator lights will be flashing and after the warning tone, click [Next Step]

To start video recording, you can either (1) insert an SD card into the device or (2) use your mobile storage.

Insert the SD card into the PTZ camera. Your main screen is as shown here.

There are several functions when using the SD card as a storage method, including:

- **Video Sharing** – You can have up to three people to share your video with. Simply invite them using a QR code.
- **Cloud Service** – Videos saved onto your SD card can be uploaded onto the cloud.
- **Replay Video** – Videos can be viewed anytime on your mobile device.
- **Setting** – Access video settings on your mobile device to suit your needs.

Note: The advantage of having SD card storage provides 24hr video recording.

To start video recording using your mobile storage, your main screen is as shown. This method has several functions, including:

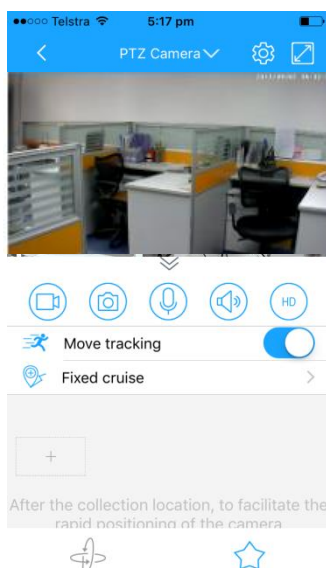

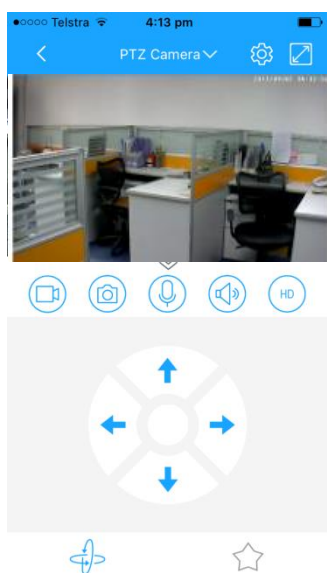

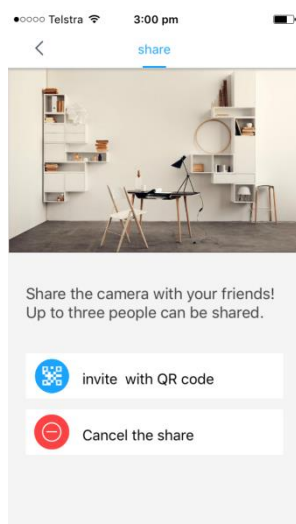

- **Video Record** – Starts or cancels video recording.
- **Picture Capture** – Takes a picture using the device
- **Microphone** – Turns on the device microphone function.
- **Speakers** – Turns on the device speakers to enable sound.
- **HD** – Records the video image in high-definition quality.

To navigate the video camera during recording, use the directional arrows.

Press on the 'Star' button to enter 'Tracker Mode'

In Tracker Mode, the device can monitor movement and motion tracking.

- **Move Tracking** – Enables the device to record video when there are movements.
- **Fixed Cruise** – This function enables the device to patrol and record a specific area. It requires two locations, press on the '+' button to add one location.

Click [ ] to enter camera settings.

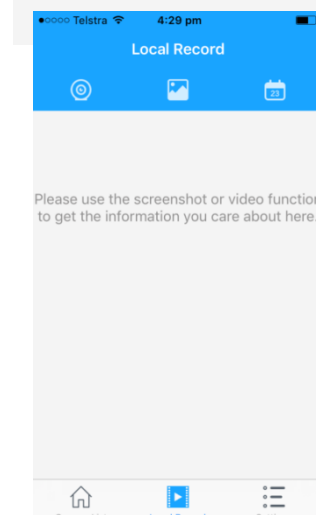

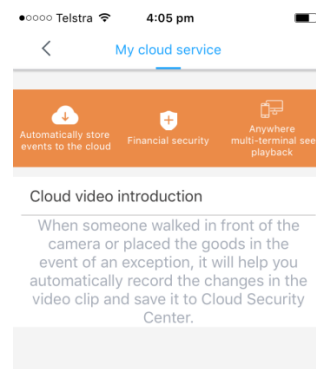

In the Setting Menu, there are several functions to operate the device using the app, including:

- **On/Off** – Turns device on/off using the app.
- **Guard Scene** – Set time range to monitor the area according to your needs.
- **Night Vision** – Turn on/off light during recording.
- **Rotate 180 degrees** – Device will automatically rotate 180 degrees during recording.
- **MIC** – Turns on device microphone.
- **Voice Prompts** – Enable alerts and warnings
- **Indicator Light** – Turns LED device light on/off
- **Volume** – Controls volume by slide bar.
- **Unlink Camera** – Delete the camera that is linked to the app.

To access cloud service, press on 'My Cloud Service'. You are required to log into your cloud network to proceed. Using the cloud service:

- Video recorded can be uploaded and stored in the cloud network.

To view video recorded into your mobile phone, press on 'Local Record'.

Select a specific time or date to view the recorded video or captured image.
